Sunflower Model 1435 Split-Wing Disc Harrows

March 2009, Duluth, GA --- The Sunflower Model 1435 split-wing disc harrows provide the tillage performance that has made the Sunflower 1435 discs the best selling disc in North America in sizes to handle the largest acreages and the most powerful tractors. At the same time, the wing-fold 1435 discs were designed for 13-ft., 6-in. transport height to minimize any issues with overhead clearance during road transport. In addition, the wing-fold 1435 discs feature the greater weight for better penetration and more UHMW material in wear points requiring less service that have helped make 1435 discs the industry leader. Proper placement of walking tandem and gauge wheels to the outer edges of the wing frames controls the disc gangs ensuring level discing. The Sunflower trunnion bearings provide positive alignment and ensure positive lubrication. A third and lower hitch position has been included on the 1435 to better match the lower drawbars of track tractors.

The Model 1435 discs are available in 37-ft., 3-in. and 40-ft. cutting widths. Additional features include single-point depth control, a patented split-wing folding system, and C-Flex mounted scraper bars. Greaseless UHMW hinges and transport connections are incorporated into the high wear areas. Proper positioning of walking tandem and gauge wheels are included on wing frames.
